

Macintosh Computer Support Manual - for Mac OS 7.x to 9.x (Macintosh Desktop Support manual Book 1)

If you have an older Macintosh computer running OS 7 to 9 and need to keep it running smoothly and without problems and to avoid losing valuable data, this is the book for you! This is a short and straight to the point manual for troubleshooting older Macintosh computers running on Mac OS 7 to 9. I spent 10 years troubleshooting and supporting Macs in every imaginable department and type of work, and the same tasks for keeping your computer running smoothly and preventing crashes and loss of work remained the same. There are step by step instructions on how to maintain your operating system, keep it running smoothly and bug free, troubleshooting software problems, printing problems, email problems, memory problems, desktop issues and much much more. If your computer crashes and/or you need to reinstall a new clean version of the Operating System, there are step by step instructions with screen shots walking you through every step of the way so you wont lose all your work. NOTE: This manual does not cover any Operating system past 9.x. It will not be helpful on any Macs running OS X because the OS changed to UNIX after that.
