# To Be a R coder in 4 Hours

This is a book for PEOPLE who would like to do data management, calculation, statistical computation, or just want to PRETEND you are a CODER without God painful course training. Just in FOUR HOURS. R is a user-friendly programming environment. You could do many useful computations, asked by your boss d(-.-)b, in R. However, KNOW it and USE it is quietly different. The main goal of this handbook is to provide an easy way to accomplish these tasks throughCOPY and PASTE. In this book, you could find the way to do many tasks in an easy way that could not or not easy to be done by MS-EXCEL. The scale of data is range from 1 row and 1 column to 1,000,000 rows and 1,000 columns on your grandpa personal computer (2-core/4G RAM/500G storage). Under some royal-equipment laptop like MacPro(4-core/16G RAM/2T storage) it could reach 5,000,000 rows and 2,000 columns. This is a Dantalians book especially for those Homo sapiens hopes to be a coder but dont know where to put his/her first step and those who want to solve their problems, couldn`t be done by EXCEL, in a quick way. See the content and SAVE your time NOW!   Content 1. Introduction (How to use this handbook) 2. How to Download R5 3. Quick Start with R.6 i. Input/output (I have data, how to give it to R?) ii. Outsourcing from free library (Others had done that!) 4. Useful Tips in R i. Combine multiple vectors/matrix ii. Assign value automatically iii. Org 5. Statistic Library with R i. Comparison Analysis (Bigger or Smaller?) A. Student t test B. Wilcoxon rank sum test(U-W test) C. ANOVA ii. Regression A. Simple/multiple linear regression (continuous data) B. Logistic Regression (Yes/No data) C. Ordinal Logistic Regression (levels data) D. GEE model (time series data) iii. Correlation Analysis A. Pearson correlation analysis B. Spearman Rank correlation analysis

iv. Survival Analysis A. KaplanMeier plot (plot it!) B. COX regression (fit survival curve to clinical data) C. Log rank test (compare two survival curve)
